

## **About Integrated Medical Systems**

Founded in 1995, Integrated Medical Systems has grown from a regional medical distributor based in the Midwest to one of the leading national distributors within the alternate site market. Focused on infusion centers, IMS strives to carry high quality products and latest technology at the best prices to help our customers meet the unique needs of every single patient. Throughout our 25 years, IMS has always had patients in mind.

As a proud partner of NICA, IMS recognizes the emergence of the infusion center market and the growing demand for treatment in the alternate site setting. Aligning with NICA's goal to ensure all citizens nationwide have access to high-quality, safe, and economical community-based care, IMS has 12 full service distribution and biomedical service centers and multiple Sales Representatives located regionally to accommodate our customer base in all 50 states.

Providing a high level of service to our infusion center customers is of utmost importance to us. To meet current and future market demand, we've recruited the most innovative, dedicated, and experienced medical sales and biomedical professionals to enhance the experience of our customers. We strive to provide quality and efficient service, so you can focus on your patients.

IMS' goal of attending the 2020 NICA Annual Meeting was to connect with educators and leading organizations to learn of opportunities and best practices to better serve our patients in the infusion center space. We look forward to learning, connecting, and collaborating at the 2021 meeting!

With patients and providers in mind, IMS has you covered.
